## Why Dulax Enterprises Limited?

DULAX ENTERPRISES LIMITED has rich expertise in various waste management and recycling that put together, create mind blowing professional and expatriate experience. Our purpose and values define the way we work together and perform as a business. We want to constantly demonstrate our commitment to being one of the Local Company, most trusted and respected. We ask our customers, consumers, shareholders, governments and the communities in which we operate, to trust that, we understand our responsibility as the one of the leading premium recycling and waste management companies in Kenya.

In our code of business conduct, we strive to demonstrate the highest standard of integrity in the way we behave towards each other and to those outside DULAX ENTERPRISES LIMITED . Our actions and interactions with our clients clearly reflect our commitment in doing the right thing. Reputation is critical to our business success and can only be enhanced by behavior of which we can all be proud of.

## Our Construction Business Principles

### **a) Client Orientation.**

We do not just provide professional services; we help our clients find optimal solutions and expand options to better operations procedures.

### **b) Employees Engagement.**

Our corporate system allows for boosting of market options and the summary effect of teamwork and respect of employees

### **c) Quality of service**

Permanent improvement of the quality of our services is an alienable condition for our prosperity

### **d) Legislation Adherence**

Though we act as buffer between the employer and Labor institutions, we never circumvent the law.

# What we do??

## **We collect your waste reliably and sustainably every day.**

We offer waste management services to all types of waste producers residential houses and apartments, office buildings, restaurants, schools, shopping malls, factories and hospitals.

Cities across East Africa are growing rapidly, yet, the waste management infrastructure to manage the increasing waste amounts does not exist. Current waste disposal methods are extremely harmful to human and environmental health: 50% of the 4,000 tons of waste produced in the Nairobi Metropolitan Area every day remain uncollected. The remaining 50% is dumped at various dumpsites like Dandora. Less than 10% of the waste actually gets recycled.

## **What we do: Recycling 95% of the waste we manage**

**A**t Dulax Enterprises Limited we are changing this by recycling 95% of the waste we manage.

Through our vertically integrated model of waste collection, sorting, recycling, composting and incineration we are able to offer our customers a one-stop-shop that meets the most demanding sustainability standards. Our recycling rate of 95% represents one of the highest recycling rates globally.

And when there are no other recyclers for many waste materials, we invest into our own recycling infrastructure to ensure that almost every waste material gets a second life. This is why we recycle the majority of the waste we collect internally. We compost all organic waste at our own composting plant. We recycle all plastics (other than PET bottles) at one of our two in-house plastic recycling plants: One for plastic containers and one for flexible packaging. And we are constantly looking to add additional recycling infrastructure for other waste fractions.

**At Dulax Enterprises Limited we understand waste as a resource.**

## MILESTONE

Through our recycling collection services, we have been able to recover over 5,000 Tonnes from the environment over the past 4 years.

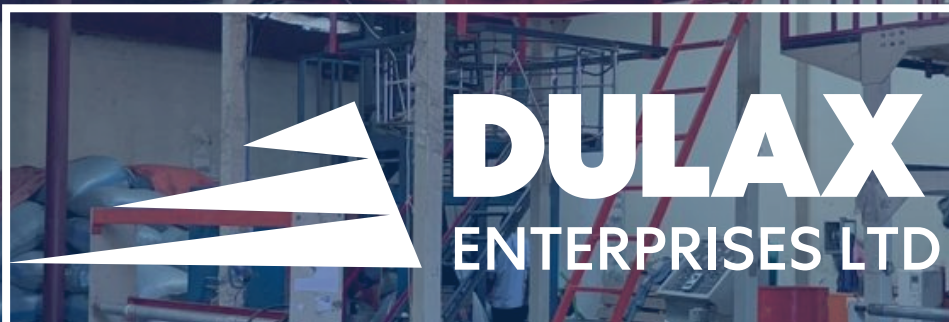

### HOW WE SORT WASTE:

#### **We sort your waste into more than 40 different fractions**

Recycling is the foundation of our waste management model. This is why waste separation and sorting are essential in what we do. Only when waste is sorted well and not overly contaminated can it be recycled.

After collection we take the waste to one of our sorting plants. Here we always try to sort out as much waste as possible for onward recycling. Using conveyor belts and other machinery our trained staff sort the incoming waste into more than 40 different waste fractions: paper, cardboard, plastic containers & packaging, styro-foam, glass, metal, aluminum, shoes, textiles and many more fractions. Most of these materials are then compacted for easier storage and onward transport.

We take the sorted organic waste to our own composting plant. Plastic containers and packaging go to our own plastic recycling plant. We take other materials (paper, metals, glass) to third-party recyclers where they are processed into new raw materials.
